

# Your friendly mobile app toolchain

on top of cordova

### Build multiple apps

Simply produce multiple unique apps on a given platform within a single project.

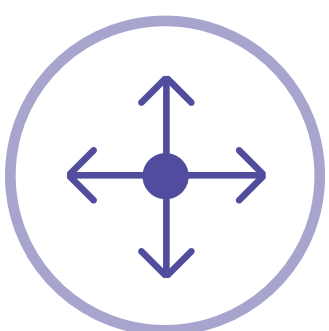

### Integrate your front-end build system

Integrate the front-end build tool you like and tarifa will trigger it.

### Interactive project bootstrap

No need to remember every required information while creating a project, tarifa will asks you questions.

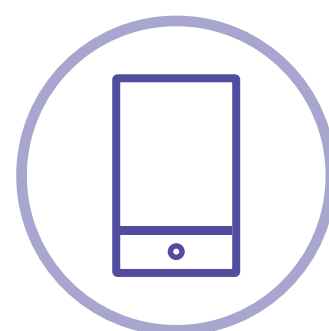

### Deploy to tester from the CLI

No need to launch a browser to upload binaries to hockeyapp.

### Manage iOS provisioning files

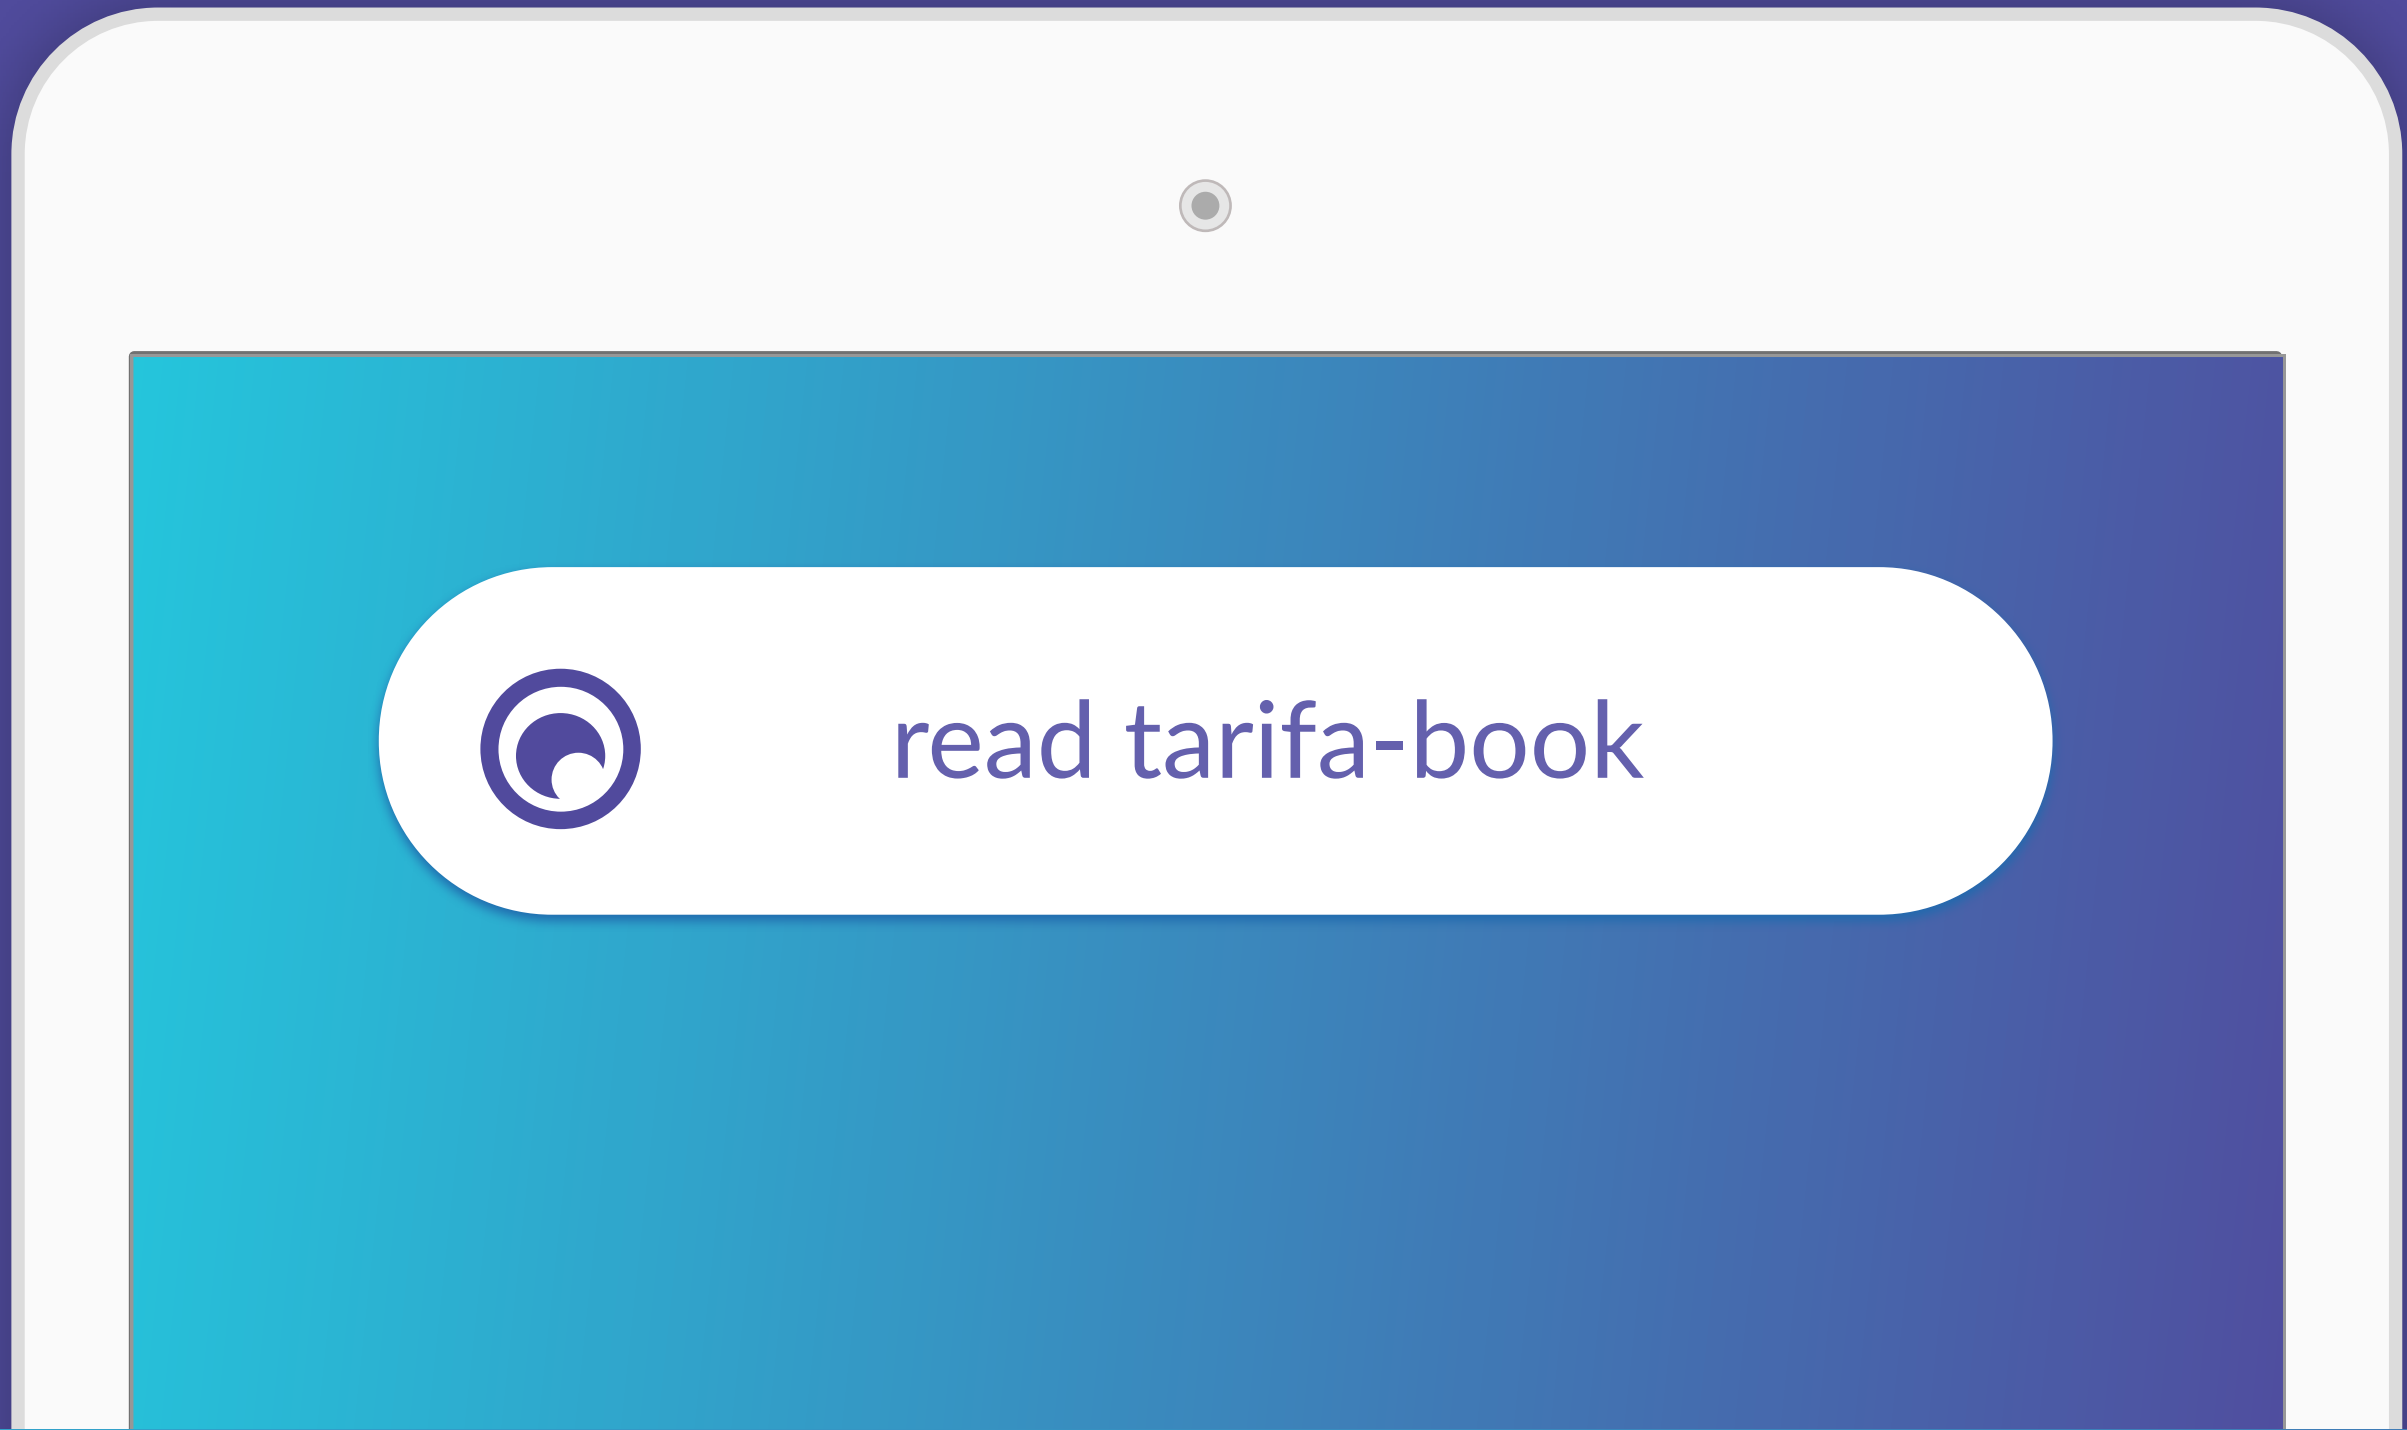

No need to use the provisioning portal each time you add a new device to a provisioning file.

### Available platforms

tarifa supports a subset of cordova platforms: web, ios, android, windows phone 8 and windows8.
